

A vehicle recorder that connects to your Wi-Fi!

The CP4S-W: no SIM card, no extra data, just pure performance.

Eliminate uncertainty

Connect up to 4 HD (720p) cameras for crystal-clear video on every channel and nearly 360-degree vehicle visibility.

Next-Gen Data Security

Safeguards protect the SD card, video files, and data transmission. All cloud data is encrypted on AWS.

Improve Driver Safety

Add an in-cab monitor to reduce blind spots, plus gain visibility that allows you to coach better driver behavior.

Protection from Power Disruption

The CP4S-W will continue recording and send video of the incident 10 seconds before and after, even when power is disconnected.

Immediate Access to Incident Data

With real-time location and behavior tracking, 4G/LTE sends you critical event notifications near real-time so you can respond quickly.

Rugged Commercial Grade Design

Engineered for reliable performance in any environment, yet with a compact design that fits anywhere.

On-Demand Hosted Video

Incident videos automatically upload to the cloud, but you can also remotely access footage stored on the SD card.

No Data Costs with Wi-Fi Connectivity

It can connect to a Wi-Fi network inside a vehicle. The CP4S-W doesn't have a SIM card, so there's no additional data fees.
