

ADD AI TO YOUR EXISTING CAMERAS.

Cloud-Based
AI Tech Package
Add AI instantly for a
clearer view of your
drivers without the
cost of AI cameras.

SmartID
FACIAL
RECOGNITION

EVENT
TRIGGER

DISTRACTION
DETECTED

AI TECH PACKAGE FEATURES AND BENEFITS

- Cloud-based artificial intelligence (AI) add-on features that work with any SmartWitness 4G non-AI cameras
- Two key technologies:
 - **SmartID facial recognition technology** automatically associates driving behaviors with the individual driver rather than the vehicle – no login required
 - **CARE technology** uses AI algorithms to determine if key driver behaviors such as fatigue or distraction occurred leading up to an event
- If non-AI SmartWitness 4G cameras are already in place, can be activated instantly without having to change or add hardware
 - Affordable – improve fleet management with AI without the expense of AI cameras
 - Flexible – easy to add, easy to update with future enhancements

SmartID

Uses facial features from the driver-facing camera to identify and assign trip data to a driver without requiring the driver to do anything other than show their face.

COMPUTER-ANALYZED RISK EVALUATION (CARE) CAPABILITIES

Machine vision technology determines if key driver factors occurred leading up to or during a triggered event:

Driver distraction

Driver fatigue
